TYPE • AUTOMATIC 8 SPEED
TRANSFER CASE • 2 SPEED HIGH|LOW

STEERING SYSTEM

TYPE • HYDRAULIC | ARTICULATED
CENTRELINK • MILITARY ENGINEERED FLEX-STEEL

TRACKS

TYPE • MOLDED RE-INFORCED RUBBER
OPTIONAL ICE CLEATS

ELECTRICAL SYSTEM

VOLTAGE • 12V DC

ANYWHERE, ANYTIME, TOUGH

Custom built on a chassis still utilized by the military today – this one of a kind, customized machine is an all-access pass to mother nature.

Snow doesn't slow this machine down; it's built for it. This machine is designed to handle all weather conditions with the ability to float on deep snow. The extremely low ground pressure and articulating tracks allows the machine to act as a snow-shoe and stay above the deep snow.

This means you can eliminate the need of snowplowing for access, saving you huge costs and time snowplowing to haul in crew and equipment.

Not only can it haul crews of up to 13, it has an impressive payload of 5000lbs to haul equipment and materials into difficult to access work sites safely and efficiently.

This high speed offroad warrior can act as a crew or cargo carrier, emergency response vehicle, and snow plow. Designed to pull up to a 5500 LB (2500 KG) trailer in addition to the caboose.

Additional variations are only limited by your imagination.

DESIGNED
TO BE SAFE

INSPIRED BY
THE SNOWSHOE

SIMPLE.
RELIABLE.
